

Friend foe competitor or parasite?

Browse through the [photo galleries](#) and choose creatures to complete the table. You can draw, name or cut and paste your animal into the table. Give reasons for your choices.

Relationship Type	Organism	Reasons
Competitor Another organism that competes for the same food, shelter, space, or mate.		
Parasite: an organism which depends on another organism (its host) from which it obtains food and protection.		
Predator An organism which seeks out other creatures to eat.		
Collaborators Collaboration involves different species benefiting each other such as some crabs and seaweeds.		
Producer An organism which can make its own food		
Consumer An organism which cannot make its own food, but must eat other organisms, or the remains of living things.
